金属催化剂 Metal catalyst

The company specializes in the R&D and manufacturing of metal honeycomb substrates and catalyst carriers, with a strong focus on industrial VOCs treatment, internal combustion engine exhaust purification, and incineration system emissions control. Utilizing special alloy substrates, the products feature high-temperature oxidation resistance, high mechanical strength, rapid heating and heat dissipation, and excellent thermal shock resistance; dimensions — including diameter, height, and honeycomb cell size—can be customized to meet specific operational requirements. The products are supplied to manufacturers of environmental protection equipment as well as the chemical and industrial coating sectors.
